

● B2B CAPABILITY PROPOSAL

Vendor+ Data Operations

High-fidelity human-in-the-loop data operations built to power advanced machine learning, AI modeling, and high-volume enterprise pipelines.

EXECUTIVE SUMMARY

Vendor+ delivers rigorous, human-in-the-loop data operations. We specialize in transforming massive, unstructured audio, video, and text pipelines into high-accuracy ground truth datasets tailored strictly to your proprietary guidelines and taxonomy.

OUR CAPABILITIES

01 / TRANSCRIPTION

High-Volume Audio & Video Transcription

Verbatim or clean-read transcription executed across complex, multi-speaker environments with multi-layered, rigorous manager verification.

02 / SEGMENTATION

Media Asset Segmentation

Precise cutting, micro-clipping, metadata tagging, and partitioning of massive media catalogs into structured, machine-learnable datasets.

03 / LABELING

AI Dataset Annotation

Phonetic labeling, structural classification, and prompt engineering data enrichment designed to train complex generative models and LLMs.

04 / HUMAN-IN-THE-LOOP

Human-in-the-Loop QA

Continuous validation of automated algorithm outputs, manual content moderation, and script reviews to guarantee strict alignment with your metrics.

● OUR DELIVERY WORKFLOW

We eliminate human error and safeguard against guideline drift through a strict multi-pass filtering process. No dataset is delivered without undergoing three independent layers of verification.

01

Client (Initiation)

CLIENT INGEST

The project launchpad. You provide raw source data (audio, video, text, 3D assets), define technical specifications, establish edge cases, and set the target accuracy bar.

INPUT (IN)

Raw media assets, task specifications, and initial reference guidelines.

OUTPUT (OUT)

Approved statement of work (SOW) and defined scope for the initial batch.

02

Personal Vendor (Setup)

PROJECT MANAGER SETUP

Your dedicated Account/Project Manager analyzes specifications under a microscope, structures workflows, creates interactive guidelines for workers, configures annotation platforms, and runs a small pilot sprint.

INPUT (IN)

Client specifications and custom validation samples.

OUTPUT (OUT)

Calibrated workforce guidelines, platform configurations, and task queues.

03

Workforce Processing

CALIBRATED WORKFORCE

Certified remote specialists (annotators, transcribers, editors) process your tasks in parallel, working within secure environments with strict focus on guidelines, speed, and raw quality standards.

INPUT (IN)

Granular step-by-step instructions and assigned task packages.

OUTPUT (OUT)

Initial draft output of processed assets (Version 1.0 Draft).

04

Detailed QA Review

QA MANAGER (100% REVIEW)

A dedicated QA Manager performs a comprehensive, 100% manual review of every single delivered task. They fix minor spelling, grammar, or labeling mistakes and immediately reject faulty files back to workers for revision.

INPUT (IN)

Raw draft output (V1.0) received from the processing team.

OUTPUT (OUT)

Cleaned, high-precision structured data (Version 2.0 QA Verified).

05

Surface QA Auditing

QA TEAM LEAD (SPOT-CHECK)

The QA Team Lead performs a random, statistically significant audit (10–20% of the batch). This stage verifies the QA managers' work, prevents subjective guideline drift, and certifies the overall accuracy score.

INPUT (IN)

100% verified and corrected dataset from the QA managers.

OUTPUT (OUT)

Validated and audited batch with certified accuracy scores.

06

Vendor Final Validation

VENDOR FINAL SIGN-OFF

Your Personal Vendor conducts final acceptance testing (Acceptance QA). They verify file schemas (JSON, CSV, custom APIs), test metadata mapping, randomly inspect critical edge-case files, and compile a delivery report.

INPUT (IN)

Audited and certified data ready for export packaging.

OUTPUT (OUT)

Final structured release-ready package and analytical performance report.

07

Client Delivery & Loop

DATASET RELEASE

You receive a premium-tier dataset ready for direct training pipelines. Any feedback or adjustments from your team are automatically looped back to update instructions for the next operational batch.

INPUT (IN)

Premium, multi-pass verified release-ready dataset.

OUTPUT (OUT)

Successful AI model training and optimized ruleset for Batch #2.
